Wouldn't it be ideal to make soap and water the first point of contact? From sensor flush valves to faucets and soap dispensers, your users can go through motions without touching handles, tapping buttons.

Not only will you enhance the user experience, but you can help maintain a cleaner restroom environment.

Here are touchless and smart upgrades you can bring to your facility.

**Touchless Experience**
From sensor faucets to flush valves, your valued customers and staff will go through the motions using our fixtures’ precision detection, instead of pressing up and down on handles.
**RETROFIT BUNDLE**

- **Z6915-XL**
  AquaSense® sensor faucet

- **ZERK**
  E-Z Flush® retrofit kit

- **SMARTdri®**
  Energy-efficient sensor hand dryer

**PERFORMANCE BUNDLE**

- **EZ Gear Technology**
  Sensor faucet and soap dispenser

- **EZ Gear Technology**
  Sensor flush valve

- **VERDEdri®**
  HEPA-filtered sensor hand dryer

**NEXT GENERATION BUNDLE**

- **Serio® Series**
  Connected faucets

- **ZEMS6000**
  AquaSense® connected flush valve

- **VMax® V2**
  HEPA-filtered vertical sensor hand dryer
**Sensor Hand Dryers**

CDC tells us to scrub our hands with soap and water for at least 20 seconds and dry completely. World Dryer speeds up the final step, using fast-drying sensor operation and HEPA filtration. Additionally, antimicrobial technology is incorporated to protect the dryer from odors, stains, and deterioration caused by bacteria, mold and fungus.

**Handwashing Scorecard**

Zurn’s IoT-enabled technology captures each handwashing ratio, frequency and duration in real time to help promote proper handwashing across your facility.

**Antimicrobial Surfaces**

Antimicrobial Surfaces Laboratory testing finds, when cleaned regularly, the antimicrobial surface continuously acts against bacterial contamination*, achieving 99.9% reduction within two hours of exposure.

---

*E. coli O157:H7, Methicillin-Resistant Staphylococcus aureus (MRSA), Staphylococcus aureus, Vancomycin-Resistant Enterococcus faecalis (VRE), Enterobacter aerogenes, and Pseudomonas aeruginosa* The use of CuVerro® bactericidal copper products is a supplement to and not a substitute for standard infection control practices; users must continue to follow all current infection control practices, including those practices related to cleaning and disinfection of environmental surfaces. This surface has been shown to reduce microbial contamination, but it does not necessarily prevent cross contamination.
